For the babys' vinyls

The favourite colors of the small ones:

 Stone Yellow PANTONE 107C	 Primrose Yellow PANTONE 116C	 Light Orange RAL 1007 PANTONE 137C	 Orange RAL 2003 PANTONE 166C	 Cherry Red RAL 3020 PANTONE173C
 Magenta RAL4003 PANTONE 205 C	 Pink PANTONE 204C	 Violet RAL4008 PANTONE 689C	 Light Blue PANTONE 2915C	 Cobalt Blue RAL5013 PANTONE 532C
 Lime Green PANTONE 368C	 Brown	 Dark Blue RAL 5003 PANTONE 533C	 Gentian blue PANTONE 632C	 Dark Green RAL6026 PANTONE 343C

PARTICULARITIES OF OUR COLORS

Matt or Glossy

All our colors are available in glossy or matt versions, except the special colors whose particularities we explain below. We recommend the matt colors for the decoration of interiors and the glossy ones for the labeling of vehicles.

Particularities of the special colors

- **Pistachio green.** It is a very used color especially for the competition
- **Chrome.** It is a mirror brightness or stainless steel color, it is valid to be collocated behind glass, but we don't advise you to put it on walls, as it is very fine and stresses a lot the imperfections of the surface where it is put.
- **Etched vinyl.** This vinyl is also called "sandblasting" or "translucent". It is used very much in bars, restaurants and offices in order to matt the windows, avoiding the image to be seen from outside but letting the light enter.
- **Phosphorites or fluorescentes.** They are very drone colors and it is very difficult to see them on the screen. They can't be seen in the dark and they don't charge light. They are only very drone. The rear of this vinyl is white so it can't be placed behind glass.
- **Carbon fiber imitation vinyl.** This is the one that can be seen on the list of colors of each product. It seems just like the real carbon fiber. It is a metal texture and the rear is chrome silver, so it can't be placed behind glass. It is not moldable. So it isn't good for bonnets or dashboards.
- **Adaptable carbon fiber imitation vinyl.** It is a metallic vinyl, with perfectly moldable carbon fiber texture. It is very useful for dashboards, mirrors, moldings, etc.

Placement behind glass

If we collocate a vinyl behind a glass and we want it to be seen from the exterior we have to take into consideration the following:

- All the colors are the same in front of and behind the vinyl, except the phosphorites and the carbon fiber.
- The glass itself will give brightness to the adhesive so even if we collocate a matt color it will be seen as a glossy one because of the glass.
- The carbon fiber and phosphorites colors are not valid for this option.
